**GREEN-UP**

**Lawn Food with Crabgrass Preventer**

**PREVENTS CRABGRASS & LISTED ANNUAL WEEDS & GRASSES**

**FEEDS YOUR LAWN OVER 3 MONTHS**

**SEASON-LONG CRABGRASS CONTROL**

**APPLICATION INSTRUCTIONS AND EQUIPMENT**

**USE DIRECTIONS FOR TURF**

**APPLICATION TIMING**

- Timing: Apply this product until turfgrass has recovered from the mechanical injury caused by these cultural practices.
- Note: Excessive temperatures, or lack of moisture may result in turfgrass injury.

**USE PRECAUTIONS FOR TURF**

- Always read and follow label directions and precautions for application.
- Use of this product on lawns and ornamental turfgrasses that are not well established, or weakened by stress due to mechanical operations, pests, or prior herbicide use, may result in turfgrass injury.

**TIPS FOR IMPROVED WEED CONTROL**

- Postemergence control is limited to crabgrass only, but is effective up to 4 weeks after crabgrass has germinated. This generally corresponds to the time when crabgrass seedlings are at the 3-leaf stage of growth and first become visible in the established turf.

**OTHER INGREDIENTS:**

- Bermudagrass
- Bahiagrass
- Zoysiagrass
- Bentgrass, creeping

**WEEDS CONTROLLED OR SUPPRESSED**

**SPREADER SETTINGS**

**APPLY GREEN-UP™® ON A FRESH, DRY GREEN LAWN TO PROVIDE ANCHORAGE FOR THE LATER APPLICATION OF NITROGEN TO THE LAWN.**
SPREADER SETTINGS

Sweep (do not wash) all fertilizer materials from surfaces immediately after application, because certain fertilizer ingredients can cause permanent stains. Wash out spreader after each use and allow it to dry on an average walking speed. Reduce setting for slower speed; raise setting for higher speed. Check your spreader on 250 square feet and adjust to apply at the rate of .90 pounds per 250 square feet. An accurate calculation can be made by application to 1,000 sq. ft. and adjusting spreader opening to apply 3.6 lbs. per 1,000 sq. ft. Settings are based on average conditions and should be adjusted for different conditions. The following settings are approximate.

**Acidic Soil. See right for more details.**

*For very acidic low pH soil, supplement this program with Mag-I-Cal for 2% Wood Biochar (plant extracts) 1% Polyhydroxycarboxylic Acids (derived from 1% Humic Acid (derived from humus) ALSO CONTAINS NON-PLANT FOOD INGREDIENTS: Carbonate, Iron Humate, and Soy Protein Hydrolysate.

Iron (Fe) ................................................ 0.5%
1.5% Combined Sulfur (S)

FEED YOUR LAWN

Established Lawns

HARD SOILS

NEW LAWN OR OVERSEEDING LAWNS OR SODDING:

Apply MAG-I-CAL PLUS any time of the year with other products. WHEN seeding or sodding lawns, MAG-I-CAL PLUS should be applied with the “Spreader Settings” chart below for best results, on or within 15 minutes after application for 15 minutes. When seeding or sodding lawns, MAG-I-CAL PLUS should be applied any time of the year with other products. Apply any time of the year with other products on the same day it can be applied when seeding or sodding lawns.

DIRECTIONS FOR USE

MAG-I-CAL PLUS can be applied anytime of the year. Apply only as directed. For best results, spread it in the fall, winter, or spring. Watering is not necessary, but if possible, water in after application for 15 minutes. For best results, aerate or rake the lawn vigorously prior to applying MAG-I-CAL PLUS. Watering is not necessary, but if possible, water in after application for 15 minutes.

CAUTION

Do not apply more than one application of Jonathon Green products within 15 days of each other. Remove all other products prior to applying Mag-I-Cal Plus. All products should be within 10 feet of each other to ensure an overlap. Note: For Rotary Spreaders, each pass should be within 10 feet of each other to ensure an overlap. When seeding or sodding lawns, MAG-I-CAL PLUS should be applied any time of the year with other products. WHEN seeding or sodding lawns, MAG-I-CAL PLUS should be applied any time of the year with other products.

Information regarding the contents and levels of metals in this product reduce corrosion. Exposed metal spreader areas with oil to staining. Wash out spreader after each use immediately after application, because all fertilizer materials from surfaces rate of application. Sweep (do not wash) speed. Reduce setting for slower speed; are based on an average walking pounds per 1,000 square feet. Settings this package at a suggested rate of 3 approximate applications. “Black out” dates may limit or prohibit lawn fertilizer applications from late fall to early spring in certain areas. Be aware of local ordinance requirements concerning lawn fertilizer. Buyer assumes all risk of use and/or handling if such use is other than indicated on the label. Seller makes no warranty, expressed or implied, concerning the use of this product other than indicated on the label. Buyer assumes all risk of use and/or handling if such use is from late fall to early spring in certain areas. **MAG-I-CAL promotes deeper, denser root system. **MAG-I-CAL promotes deeper, denser root system. Winter Survival Fall Lawn Food is ideal for fall seeding. Apply Winter Survival Fall Lawn Food after grass seed has been planted. You may apply MAG-I-CAL and/or LOVE YOUR SOIL in any order on the same day that you apply Winter Survival Fall Lawn Food. You can re-enter lawn area after product is applied. Apply uniformly with a lawn spreader using the chart listed below. This package applies 3 lbs. per 1,000 square feet.

SEEDING LAWNS
Winter Survival Fall Lawn Food is ideal for fall seeding. Apply Winter Survival Fall Lawn Food after grass seed has been planted. You may apply MAG-I-CAL and/or LOVE YOUR SOIL in any order on the same day that you apply Winter Survival Fall Lawn Food. Water the lawn after application to activate the seeding process and get new grass plant seedlings off to a good start.

CAREING FOR YOUR LAWN
Mow grass at 2 1/2 to 3 1/2 inches. Do not remove more than 1/3 of the grass blade at one time, with a sharp mower blade. Mulch clippings or leave them on the lawn if not needed pending on type of grass. Mow grass at 2 1/2 to 3 1/2 inches. Do not remove more than 1/3 of the grass blade at one time, with a sharp mower blade. Mulch clippings or leave them on the lawn if not needed. One inch of water from rainfall and/or watering per week is usually adequate unless drought conditions exist.

SPREADER SETTINGS

The following applies to the use of Broadcast (Rotary) Spreaders only. If you are using a Drop Spreader, refer to that section of the guide. The settings listed below are based on a normal lawn with normal placement of materials and are suitable for most average conditions. These settings are general guidelines and have been averaged from numerous tests over the years. Slight deviation from these settings will not significantly affect results. For very small or large lawns, you may have to adjust these settings. For a very small lawn, these settings will be too high. For a very large lawn, these settings will be too low. Setting 1 is the correct setting for the average lawn.
