

BLUE PANTHER[®]

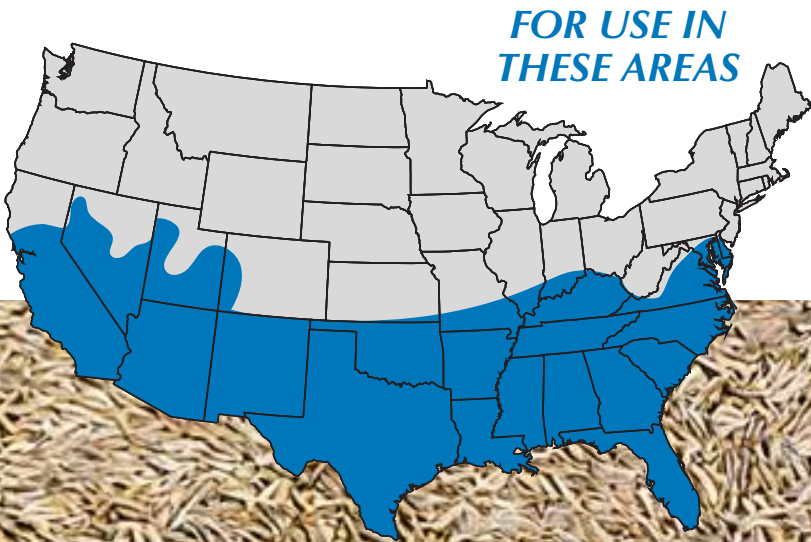

SOUTHERN LAWN

GRASS SEED MIXTURE FOR BERMUDAGRASS LAWNS

PREMIUM MIXTURE OF BERMUDAGRASS, TEXAS BLUEGRASS, & TALL FESCUE

BERMUDA THRIVES IN SUMMER HEAT, WHILE BLUEGRASS & FESCUE GROW IN WINTER COLD

FOR FULL SUN TO PARTIAL SHADE

Blue Panther Southern Lawn is a premium, all-purpose grass seed mixture specifically designed for Southern climates. It thrives in full sun to medium shaded areas. It produces an attractive, perennial, dark-green lawn. It contains naturally insect and disease resistant grasses that should germinate in 14 - 21 days.

For best results, plant in spring or early fall.

DIRECTIONS

SUCCESSFUL SEEDING CAN BE ACCOMPLISHED IF THESE PROCEDURES ARE FOLLOWED FOR BOTH OVERSEEDING LAWNS AND ESTABLISHING NEW LAWNS.

-  **1. PREPARATION:** Good seed-to-soil contact is very important in order to achieve good germination of the planted grass seed.
- (a) Mow lawn before seeding.
 - (b) Rake dead grass and debris and loosen the soil. Add additional topsoil if needed. For larger areas, a rented de-thatching machine may be easier.
- Apply seed to the loosened soil and then lightly rake it into the ground. Do not bury the seed more than 1/4" deep.

-  **2.** For best results, apply the grass seed and this **Jonathan Green** product in any order, on the same day.

Jonathan Green Veri-Green Starter Fertilizer for Seeding & Sodding
Provides the nutrients necessary for new grass growth.

We also recommend using a **Jonathan Green** Soil Amendment that is suited for your area to adjust pH and loosen compacted soil.

-  **3.** Seed bed should be kept moist, watering about 2 to 3 times daily for 2 - 3 weeks, until seed germination is complete. Mow the new grass after it has reached a height of about 2 inches.

For more information on how to best apply this product and care for your lawn visit: JonathanGreen.com

NOTE: Spring plantings may take more time to germinate because the soil is cold. Grass seed germinates when the **soil temperature** is consistently 55°F.

CAUTION: Do not apply this grass seed on horse pastures or livestock grazing areas!

SPREADER SETTINGS

SEEDING RATES – OVERSEEDING LAWNS

3 lb. seeds up to 2,800 sq. ft.

Jonathan Green Hand Held	2
Jonathan Green Standard Rotary	5.5
Jonathan Green Deluxe Rotary	11
Scotts Rotary	5
Scotts Drop	7

SEEDING RATES – NEW LAWNS

3 lb. seeds up to 1,400 sq. ft.

Jonathan Green Hand Held	3
Jonathan Green Standard Rotary	5.5*
Jonathan Green Deluxe Rotary	11*
Scotts Rotary	8
Scotts Drop	9

* Go over lawn twice at this rate.

My Pledge Of Satisfaction
We have made every effort in the formulation of this product to assure that you will be satisfied with the results. If, for any reason, you are not satisfied, please write and describe the problem. Our lawn specialists will make every effort to assure your success.

Benefits of lawns: Grass slows down and absorbs water run-off and controls soil erosion while cleansing water of impurities and dust. Grass plants remove carbon dioxide from the atmosphere. A 5,000 sq. ft. lawn produces enough oxygen for 8 people daily. Lawns cool off the immediate area, about 30 degrees cooler than asphalt and about 20 degrees cooler than bare soil. Lawns reduce noise, glare and increase your property value. Leave grass clippings, if possible, so nutrients and water go back into your lawn.
