

Black Beauty™ SeedRoll

Combination: Mulch, Seed & Fertilizer
Grass Seed Mat for Bare Spots & Slopes

This all-in-one seed mat is ideal for bare spots and hilly areas and contains Black Beauty grass seed, Starter Lawn Food and mulch. SeedRoll does well in sunny or shady areas, and grows in 10 - 20 days. SeedRoll is bio-degradable and protects seed from birds and from erosion on slopes due to heavy rainfalls.

- Just roll, water and watch grow!
- Can also be “cut” with scissors to fit a bare area of ANY shape

DIRECTIONS

For best results use Black Beauty SeedRoll anytime temperatures in your area are consistently above 50° F. Fall planting or repairs should be completed six to eight weeks prior to temperatures dropping below 40° F.

Good preparation of the area is essential. Do not lay SeedRoll over existing grass or vegetation. SeedRoll must be in contact with the soil to grow. Clear area of debris and loosen the top 2 inches of soil with a rake to create a smooth surface. Do not lay SeedRoll during periods of strongwinds or approaching heavy rains. Cover edges of roll with soil to keep in place.

Roll out first section of SeedRoll over the prepared area. Cut this section away from the roll and lightly water the outside portion, keeping the inside edge relatively dry. SeedRoll will “stick” to the ground once moistened, so be sure it is in place before watering.

For Larger Areas – lay more than one section closely together without gaps, slightly overlapping the first section. Once this is done, finish watering your first section of SeedRoll. Remember; always try to keep your bottom edge of the new section dry. Continue until desired area is covered. **Do not walk on SeedRoll once installed. Once finished, water lightly until all sections are wet.**

Water your prepared area well the night before planting. Once planted, water frequently with sprinkler or hose. DO NOT apply forceful jet of water to SeedRoll. SeedRoll holds and locks in moisture, so watering frequently in small amounts is best. Ideally water 2 or 3 times a day, until wet each time, keeping SeedRoll constantly wet for the first three weeks or until grass reaches 3 inches tall. Mowing can begin when grass reaches 3 inches.
