

CRABGRASS PREVENTER

plus NEW SEEDING

Lawn Fertilizer

10-15-10

Jonathan Green Crabgrass Preventer plus New Seeding Fertilizer prevents crabgrass and grassy weeds from germinating, and allows seeding on the same day without injuring seedlings.

5,000 sq. ft. #10465

ACTIVE INGREDIENT	
Siduron.....	3.5%
GUARANTEED ANALYSIS	
Total Nitrogen (N).....	10.0%
5.87% Ammoniacal Nitrogen	
4.13% Urea Nitrogen	
Available Phosphate (P ₂ O ₅).....	15.0%
Soluble Potash (K ₂ O).....	10.0%

- Stops the grassy weeds but allows new grass seed to sprout
- Contains Tupersan® to control weeds before they emerge
- For lawn repair and establishing new lawns from seed or sod
- Contains Controlled-Release Nitrogen
- Feeds for up to 2 Months
- **You may seed with this product on the same day**

WHEN TO APPLY:

Apply prior to germination of weed grasses in the Spring. Precise time of application for a specific area will vary due to climate and individual cultural practices. Generally, application during February or March will give best results. Control can be expected by applications up to the time that Forsythias bloom in Spring. If in doubt, check with your Agricultural Extension Service. For newly seeded areas, apply as the last step before watering.

HOW TO APPLY:

For best results, this product must be applied without skips or misses. Determine the correct amount for your lawn area. For freshly seeded grass apply at the rate of 2.6 to 3.3 pounds per 1,000 square feet. The best results are obtained by using the two-step procedure at the recommended half rate settings.

Apply half the required amount in one direction and the other half at right angles to the first application. This procedure will minimize the chances of color streaking and erratic crabgrass control.

At least 1/2 inch of water must be provided by rainfall or watering within 3 days of treatment in order to carry the chemical into the root zone of germinating weeds.
